## VISION

# BUILDING THE FUTURE TOGETHER

We built REVA for the world that's coming, not the one that's leaving. That means preparing our students and our partners to lead through change, not scramble to catch up.

RACEx360 is where that promise gets real. For one day, Bengaluru's best in AI, cybersecurity, cloud and deep tech share a single stage, and REVA sits right in the middle of it.

So don't just come and watch. Sponsor a track, mentor our learners, hire our talent, build something with us. The next decade of Indian technology belongs to those who build it together, and we'd like to build it with you. See you on 25 September.

**Dr. P. Shyama Raju**

Founder and Chancellor, REVA University

## INTRODUCTION

# MORE THAN JUST AN AI EVENT

AI, robotics, quantum and cybersecurity are reshaping industry faster than any one professional can keep pace with alone. REVA University built RACEx360 to close that gap in a single day.

Across four tracks, you'll hear how AI, cloud, cybersecurity and deep tech are actually being deployed inside enterprises — not just discussed. Our faculty, labs and industry mentors will be present throughout, so the learning doesn't stop when the keynote ends.

I look forward to welcoming you on 25 September.

**Dr. Sanjay R. Chitnis**

Vice Chancellor, REVA University

For every delegate, RACEx360 is designed to be more than a day of talks.

Come for the keynotes and panels, stay for the Innovation Experience Zone, the hackathon, and conversations with 60+ speakers from SAP, Infosys, AWS, Wipro and more. Whether you're here to learn, network, or scout your next opportunity, the day is built to give you something to take back.

Any good conversation at RACEx360 can turn into your next collaboration, hire, or idea. See you on 25 September.

**Dr. M. Dhanamjaya**

Registrar, REVA University

A ROOM YOU CAN'T NETWORK INTO ANYWHERE ELSE

## WHY RACEX360

**One day. Four tracks. 60+ speakers. Every leader worth knowing, in one place.**

RACEx360 isn't a webinar you half-watch with the tab muted. It's the one day a year Bengaluru's most senior AI, cybersecurity, cloud and deep-tech leaders share a single stage — and you're in the room with them. 35% C-suite and VP, 40% directors. Spend the day among the people who actually decide.

### WHAT YOU'LL LEAVE WITH:

- A working view of how AI, cybersecurity, cloud and deep tech are actually deployed inside MNCs
- Direct time with senior leaders through Flash Mentoring with CXOs and the hosted CXO lunch
- A shortlist of vendors and solutions you can name to your board, from live demos on the floor
- Peers you'll actually call again, from curated roundtables and hosted networking
- Hands-on time in the Experience/Innovation Zone and hackathon finals

### WHO IT'S FOR:

- CISOs & security leaders — DPDP-ready SOC, Zero Trust, AI threat detection, with peers who've shipped it.
- CIOs / CTOs / platform leaders — multi-cloud, FinOps, DevSecOps at scale; what to build next.
- AI & data leaders and founders — LLMs in production, agentic AI, AI governance, lab to boardroom.
- Engineers, architects, researchers, faculty and students.

Close: 750+ delegates. 60+ MNC speakers.

**Early Bird 4,000 +GST - ends 15 August, 2026.**

## RACE 2019 OVERVIEW

# ABOUT RACE360

RACE360 v1.0 brought together industry leaders, technology experts, enterprise decision-makers, CHROs, researchers and practitioners to discuss the future of emerging technologies and their impact on business transformation.

The 2019 edition focused on three major technology tracks – Artificial Intelligence, Cybersecurity and Blockchain – through keynote sessions, knowledge sessions, panel discussions, workshops, a hackathon and an invite-only CHRO dialogue.

“A flagship industry conference by REVA Academy for Corporate Excellence, bringing together the brightest minds in emerging technology.”

# INTELLIGENT SHIFT

Respectit.Bangalore  
@timesgroup.com

A slew of emerging technologies is shaping our lives, arguably at a rate of change never seen before in history. Enabled by cheap computing power and access to large datasets, machines are already doing a better job than humans in several areas. What is unique today is the rapid adoption of many of these enabling technologies and their potential to work with each other to change our lives.

While there is significant ground to cover, India is poised to take advantage of this opportunity. The Government of India is also taking several steps to spur the adoption of emerging technologies at scale. This spirit was demonstrated at RACE360 – An emerging technology conference which took place on August 28 at The Lalit Ashok in Bengaluru. The event, organised by REVA Academy for Corporate Excellence (RACE), REVA University and supported by The Times of India, is a confluence of industry and academia thought leaders to brainstorm on technology landscape, emerging trends and futuristic organisations.

People flocked in large numbers to listen to some of the best industry and academia thought leaders who discussed career opportunities in emerging technologies such as Blockchain, Cybersecurity and Artificial Intelligence. The conference endeavoured to bring perspectives on how cutting-edge technologies like Cognitive Computing, Artificial Intelligence, Blockchain, Cybersecurity, Augmented Reality, Edge Computing and a connected world will create a better future for humanity.

A day-long event, some of the thought leaders present at the knowledge sessions included Deep Thomas, Chief Data and Analytics Officer, Aditya Birla Group; Vishal Salvi, CISO and Head of Delivery Cyber practice, Infosys; Sameer Dhanrajani, Chief Strategy officer, Fractal Analytics; Akanksha Bilani, Regional Lead, South East Asia, Intel Software; Pravin Hungund, CTO, Wipro Ltd, among

Lighting the lamp at RACE360 conference (L to R) Dilip Khandelwal, MD, SAP Labs; S Y Kulkarni, VC, REVA University; Rama Vedashree, CEO, DSCI; Renil Komita, President and CEO, Terralogic; P Shyama Raju, Chancellor, REVA University

## RACING INTO THE FUTURE

REVA University's RACE360, a one-of-its-kind technology conference in Bengaluru, gives a perspective on how present day cutting-edge technologies will create a better future for humanity

others. Apart from the knowledge sessions, workshops, hackathons and panel discussions were conducted on the emerging technologies.

Dr P Shyama Raju, Chancellor, REVA University shared, "With technology growing exponentially, keeping pace with it can be quite challenging unless we conscientiously delve into the study of emerging trends and understand further its applications. We have been constantly working on evolving new programmes to suit the requirement of working professionals. With technology advances, we can only increase more output with limited resources and therefore, bringing together per-

spectives of various thought leaders is a must."

The keynote sessions saw experts speak on topics like Emerging Technologies for Business Transformation and 'Cybersecurity Trends in India'. Dilip Khandelwal, MD, SAP Labs, said, "The world is moving towards an outcome-based economy. Customers are not really interested in solutions; they are interested in outcomes. It is no more a scenario where competition happens within the same industries or sector. In fact, the interplay of industries and technologies are leading to the modern-day renaissance. The renaissance thinkers of today are companies which go beyond cor-

porate and industry boundaries and infuse technology innovation into business models," he shared. Rama Vedashree, CEO, Data Security Council of India, who also delivered the keynote address, said, "Across the world, all industries, across functions, want to be seen as a technology company. India is slowly emerging as a global hub for cybersecurity. Apart from that, a lot still needs

POWERED BY  
THE TIMES OF INDIA

to happen in India in the area of IoT (Internet of Things). AI today is catalysing transfor-

mation in every industry. As China and the US fight for AI supremacy, India, with its large talent base, has the potential to become an AI powerhouse.

According to Dr J B Simha, CTO, ABIBA Systems and Chief Mentor, REVA Academy for Corporate Excellence, REVA University, "This conference has helped position REVA University as a pioneering and outstanding emerging technology learning provider in corporate education. This conference brought together, thought leaders across industries, bringing their fresh perspectives on AI, Cybersecurity and Blockchain and how these technologies are converging to help organizations driving immense value to stakeholders." He adds, "These interactions with industry leaders will help further strengthen REVA University's corporate programmes in these areas. A distinguishing feature of their corporate programmes is the access to state-of-the-art technical infrastructure, which is not available even in the best institutions in the country. I am glad to be associated with the University, mentoring next generation leaders in skills of the future."

In the future, all organizations – public and private – are at risk from nefarious attacks that can cause serious economic damage and loss of sensitive data or intellectual property, among other negative effects. Sandeep Vijayaraghavan, VP - Cyber Security & IT Services, Terralogic Software Solutions Pvt Ltd, shared his views on cybersecurity as he spoke about a report in 2018 by NITI Aayog which states that India ranks at no 5 in terms of susceptibility to cyber-attack worldwide. "The past few years have witnessed a significant increase in security breaches across industries world-wide. Through 2020, 99% of vulnerabilities exploited will continue to be the ones known by security and IT professionals for at least one year. Companies should stay focused on fixing the vulnerabilities they know exist. While these vulnerabilities are easy to ignore, they're also easier and more inexpensive to fix than to mitigate," said Vijayaraghavan.

## AI, algorithms will be decision-makers in boardrooms of tomorrow, say experts

Times News Network

Bengaluru: Imagine a corporate boardroom meeting where one seat is occupied by a machine doing all the Artificial Intelligence-related thinking, generating complex algorithms and contributing to high-level decision making.

The scene is not out of a sci-fi movie, but a sneak peek into the future of working in boardrooms. "This is all set to be a reality," said Sameer Dhanrajani, chief strategy officer of Fractal Analytics.

**TECH CONFERENCE**

An analytics service provider in India and the US, he was speaking on the topic. "The emerging decision-making to the AI era," at RACE360, a technology conference organised here on Wednesday by REVA University and supported by The Times of India.

Dhanrajani went on to explain that experience-backed intuition will decrease to

**GOING FORWARD:** The conference held on Wednesday served as a bridge between educational institutions and the industry

30% by 2027 from 50% in 2017. Algorithms decisions will be prioritised 30% from 5% today. The importance of algorithms is such that Dharmajani predicted a rise of the 'algorithm economy' in the coming years. "Algorithm economy will consist of millions of algorithms, each one representing a piece of software code that solves a business problem or

creates a new opportunity," he pointed out.

The conference, with gargantuan bigwigs and academicians in attendance, was a bridge between educational institutions and the industry, according to speakers at the event. Like Sameer, who spoke on the future of boardrooms, speakers at the event brought into the spotlight several futuristic scenarios, issues and so-

lutions. The conference was inaugurated by REVA University chancellor Dr P Shyama Raju. "Events like these help professionals, corporates and students," said Raju.

**"Face of disruption has increased"**

Dilip Khandelwal, MD of SAP Labs in India, spoke on "Emerging technologies for business transformation". Explaining in detail about the market disruptions, Khandelwal said technology has always been a disruptor, but this time, the pace of disruption has increased. "What one builds today will be obsolete in 12 to 18 months. Interaction with customers on a day-to-day basis will keep technology up-to-date," he said.

The largest pool of candidates, industry-driven curriculum in colleges and global interest in the cybersecurity field in India has brought the country into the spotlight, Vedashree pointed out.

The issues of cybersecurity are also one of the main concerns of several leaders, said Sethi. Janardhanan, MD Cybersecurity, Assenture.

"We can't put any company in a particular vertical, each of them is a digital and tech company – be it health, retail or others. With so much convergence, security is a

concern," said Rama Vedashree the CEO of Data Security Council of India.

She added that under such circumstances, India is growing to be the global hub of cyber security. With 100 startups and AI Indian companies securing patents of security techs, Vedashree said there are also 25 to 30 global cyber-security research and development centres in the country.

The issues of cybersecurity are also one of the main concerns of several leaders, said Sethi. Janardhanan, MD Cybersecurity, Assenture.

"We can't put any company in a particular vertical, each of them is a digital and tech company – be it health, retail or others. With so much convergence, security is a

### AWARDS + GALA DINNER

- 10 women leaders honoured on stage — awards presented by the Title sponsor
- Day delegates and 200+ evening guests, one room
- Host a sponsor table - dinner-length facetime with CXOs
- Every guest takes the coffee table book home — your brand, archived

Why it matters: no other tech event in Bengaluru puts sponsors at the dinner table with enterprise decision-makers — unhurried, undistracted.
